H1 2026 User Access Review

Globex Corporation - Security and Compliance

Review date: 2026-08-01 Reviewer: Ines Duarte Approver: Tom Baker

1. Purpose

This review verifies that access to every system tagged critical in the Globex asset inventory is limited to personnel with a current business need, that privileged roles are justified, and that leavers have been deprovisioned within the 24-hour service level. It was performed against the identity provider export of 2026-07-28 and the GitHub organization membership as of the same date.

2. Method

Each system owner received the list of accounts and roles for their system and confirmed, removed, or reduced each one. Confirmations were recorded in the compliance tracker with the owner's name and the date. Removals were executed the same day and verified by a second reviewer. Service accounts were reviewed against the account registry to confirm a named individual owner.

3. Scope

The following systems were in scope for this review. Each row records the owner, the review date, and the outcome.

System	Owner	Reviewed on	Result
GitHub	Tom Baker	2026-07-29	1 removal (ytanaka), confirmed
Okta	Ines Duarte	2026-07-30	no changes

Payroll-GX	Nadia Hassan	2026-07-31	2 role reductions

4. Conclusion

All three systems tagged critical (GitHub, Okta, Payroll-GX) were reviewed. One account was removed and two privileged roles were reduced. No shared account without a named owner was found. The next review is due 2027-02-01.
